

NeoGRC Security Manager - Apps

NeoGRC Security Manager – Apps Enables

A single pane of glass for application security intelligence

Link security risks to business risks and objectives

Closed loop tracking of security issues and reflection of unresolved issues as additional risk exposures

Reallocation of expert resources from data collection and processing to analysis and remediation

Use of security data to evaluate effectiveness of controls and policies

With the ever increasing visibility and publicity of recent data privacy breaches, application security continues to be one of the top priorities for most IT and information security organizations. In direct response to this concern, significant investments have been made to assess an organization's application portfolio through internal review, external consultants, and outsourced service providers. Through this array of assessments, the validation and prioritization of a growing quantity of application security findings has become extremely challenging. In addition, most organizations do not have sufficient tools to assign, manage, and track vulnerability remediation workflow activities.

Whether the focus is on web-based applications, client-server applications, or mobile device applications, merely identifying application security vulnerabilities is simply not good enough. To protect your business, meet compliance and internal risk management objectives, and achieve leading practices, successful information security organizations must implement fast and efficient approaches for tracking the entire lifecycle of identified vulnerabilities – from initial identification through ultimate remediation.

Neohapsis Solution

NeoGRC Security Manager – Apps was created specifically to meet the growing challenges of effective application vulnerability management. Through an intuitive user interface, a powerful database and work flow engine, and exclusive Neohapsis application intelligence, Security Manager gives organizations the ability to consolidate application security vulnerability findings from a wide array of assessment sources, filter through false positives and duplicates, and manage vulnerability-related workflow activities all the way through remediation.

As part of the NeoGRC framework, Security Manager – Apps is designed from the ground up to provide insight and visibility to an organization's most critical application vulnerabilities, and be able to provide real-time updates on vulnerability trends and critical application exposures. Understanding these key areas helps organizations focus their limited resources on the areas that provide maximum benefit.

Feature Highlights

Application Security Vulnerability Data Aggregation & Correlation

Security Manager - Apps aggregates and correlates application security vulnerability data from multiple sources to create a single pane of glass for application security data. Examples include application security vulnerability scanners, outsourced scanning providers, and even consulting companies. Data aggregation can be automated through real-time connectors or simple flat file uploads.

Aggregate Security Risks to Higher Level Security Postures

Security Manager's aggregation engine allows applications to be grouped by business unit, location, or other organizational groupings to allow quick visibility to application exposures.

Create and Monitor Vulnerability Remediation Workflow

Security Manager – Apps provides a powerful workflow engine to create and monitor remediation activities. Security organizations can assign tasks to correct application security exposures, create comments and notes for the remediation team, and from a centralized dashboard maintain real-time visibility to the corrective activities.

Feature Highlights

NeoGRC Security Manager – Apps Integrations

Web application security scanners

Web application scanner service providers

Customizable XML flat file imports

Leading workflow platforms

Improve Efficiency with Audit and Compliance

With Security Manager – Apps, organizations can easily demonstrate and report on their ongoing assessment and remediation activities. From summary dashboards to discreet workflow activities, Security Manager – Apps puts critical audit and compliance information at your fingertips.

Add Business Context to Application Security Risks

Tool specific security risk ratings are generic and have little meaning to the business, until they are put into the proper context. Security Manager – Apps helps organizations link security issues such as vulnerabilities to business processes, business systems, organizations, products and services to provide that missing context.

Issues Remediation and Tracking

Once application security issues have been validated and prioritized, NeoGRC helps IT operations initiate and track remediation actions. NeoGRC's workflow and alert engines ensure remediation tasks are executed in a timely manner. NeoGRC can also integrate with help desk systems to provide bi-directional support ticket automation. Issues that have not been resolved can also be tracked as additional risks to reflect the exposure.

Exclusive Insight From Neohapsis Security Experts

Neohapsis Consultants have established a strong track record of helping customers develop better security programs and strategy. Some of this valuable, expert knowledge has been encapsulated as packaged reports, dashboards, metrics, scorecards, assessments and KRIs and made available on the NeoGRC platform.

About Neohapsis

Neohapsis is a trusted provider of governance, risk, compliance (GRC) and security software products and advisory services to Fortune 2000 enterprises and government agencies. Neohapsis combines expert services with its advanced NeoGRC software platform to deliver comprehensive GRC and security solutions for over 300 customers that include 10 of the Fortune 50 companies. NeoGRC is an enterprise GRC software platform that provides process and data automation, stakeholder collaboration, advanced analytics and visualization technologies. NeoGRC allows users to visualize risk, compliance and security data with multi-dimensional business context to support informed decision making. Neohapsis Advisory and Security Services help organizations address security, compliance, operational risk and IT risk challenges. Neohapsis consultants are recognized experts and thought leaders in the field of GRC and security. This combination of technology and service expertise allows Neohapsis to deliver solutions that fit the customer's organizational maturity, business requirements and existing technology investments.
